

Figure 2: ESG practices versus product fluidity

This figure shows the estimated coefficients for *Fluidity* from a regression of each of the listed outcome dummy variables in Internet Appendix Section IA.15 from the following regression:

$$Outcome_{i,t} = \alpha_j + \theta_t + \beta Fluidity_{i,t-1} + \gamma X_{i,t-1} + \epsilon_{i,t-1},$$

where i , j , and t denote firm, industry, and year, respectively. X is a vector of controls similar to those in Table 2. α_j and θ_t denote industry and time fixed effects. The ranges indicate 95% confidence intervals, based on standard errors clustered by firm.

Panel A. Environmental practices
